

Hot Glue Gun

Glue Stick Specification

Standard glue stick size: 7/16" diameter (between 10.8mm-11.8mm)" length.

Temperature setting depends on different kinds of glue stick:

Stick	Temperature Suggestion
Yellow	120°C
Milky	150°C
Transparent	180°C

How to Use

- 1 Insert the glue sticks into the gun from the back end.
- 2 Adjust the temperature on the orange dial by your nail or a small screwdriver between 100°C and 220°C
- 3 Power on the gun to preheat 3-5 minutes, when preheating the indicator light will turn red.
- 4 When finished preheating, indicator light will turn off, then pull the trigger slight to control the melting glue flowing out.

Caution

- 1 Proper size of sticks diameter between 10.8mm-11.8mm are required, otherwise it may damage the glue gun.
- 2 Do not touch the nozzle or the glue when the gun is working to avoid burning.
- 3 If the gun will not be used during 15mins, please cut off the power to avoid the melting glue recirculating or the damage of the gun.
- 4 It is normal with light smoke when first using, and it will die off 10mins later.
- 5 Please let the bracket stand to cool down the gun for several minutes after use, and don't replace the power cord yourself.
- 6 If it has remaining glue after use, please don't pull it off, just let it in the gun for the next use.
- 7 It is normal for some glue flowing out after few seconds you finished working because of the inertia pressure.
- 8 If the glue doesn't come out, you need adjust to the higher temperature or try another stick.
